Selected work

Personal projects across forecasting, BI, warehousing and Python analytics. Client work is not shown.

PYTHON · FORECASTING · OCT 2026

SYNTHETIC DATA

Event ticket demand and pricing

A fictional 16-match event: segment demand, estimate how each buyer group responds to price, forecast four held-out matches (8% cell-level error) and test pricing scenarios. Illustrative, not client work.

— 02 / Experience

Where I've worked

Two roles, one thread: turning data into decisions.

Sep 2025 - Present

Senior Business Analyst

Accordion, Hyderabad

- Built ticket-pricing and revenue-forecast models for FIFA World Cup 2026 and LA 2028, using demand segmentation to inform price points and size expected revenue.
- Built CRM and HR dashboards that give leaders visibility into the sales pipeline and workforce performance.
- Analyzed datasets to find revenue-optimization opportunities and performance drivers, and tracked them on executive KPI dashboards.
- Turned ambiguous business requests into structured analytical frameworks.

Jun 2022 - Aug 2025

Technology Analyst

Deloitte USI, Hyderabad

- Automated reporting workflows in Python, cutting manual effort by 80% and improving data consistency.
- Built and maintained Power BI dashboards that tracked project KPIs and delivery performance.
- Led cross-functional initiatives in data analysis, process optimization and automation.
- Coordinated large-scale system upgrades and deployments.

— 04 / About

About me

How I work, and where I studied.

I'm a business analyst who thinks like a data engineer — comfortable moving from a stakeholder conversation to a SQL query to a Power BI dashboard in the same afternoon.

I care about translating ambiguous business asks into clean analytical frameworks — and about dashboards that people actually open twice.

EDUCATION

B.Tech

National Institute of Technology Durgapur

CERTIFICATIONS

Microsoft Certified: Power BI Data Analyst Associate
